A SELECT LIST

OF

HYACINTHS, TULIPS, CROCUS,

AND OTHER CHOICE

TUBEROUS-ROOTED PLANTS,

OFFERED BY

WILLIAM BULL, F.L.S.

EARLY ORDERS ARE RESPECTFULLY SOLICITED TO ENSURE FINE BULBS.

For the convenience of purchasers who do not wish to choose their own sorts, Mr. W. BULL will have much pleasure in making suitable and liberal selections of the finest and most distinct free-blooming varieties.

HYACINTHS.

CULTURE.

The bulbs should be potted in soil composed of equal parts of cow manure, good loam, and river sand. This compost should be prepared in April or May, and afterwards turned over two or three times. If this cannot be had, the soil which has been used in a hothouse for growing Cucumbers, Tomatoes, etc., is a good substitute, and is superior to freshly-made soil.

Immediately after potting, which may be done from September to December, place out of doors on a bed of ashes, and cover the pots with six inches of the same material, or cocoa fibre is preferable; there let the pots remain till full of roots, which will usually be about six or eight weeks. If very early flowers are required, pot in September, and when sufficiently rooted force gently, and give abundance of water; but if large finely developed trusses and rich colours are preferred to very early flowers, the Hyacinth must not be forced, but when removed indoors should be placed on the shelf of a greenhouse, or in a cold frame, close to the glass, always in the most genial and sunniest situation at command, and the plants allowed to develop their flowers gradually and naturally, giving water regularly and freely, as it is well known to cultivators that failures, for the most part, arise from allowing the soil to become dry, when the rootlets are in consequence injured. Abundance of air is necessary, but a dry atmosphere and a draughty situation should be sedulously avoided.

If the Hyacinth is cultivated in glasses, the base of the bulb should just touch the water, and a little charcoal should be placed in the glass to keep the water sweet. The glasses, if possible, should be kept in a room without a fire, or better still in a greenhouse.

ANEMONE FULGENS FLORE PLENO.

A double form of *A. fulgens*, brilliant scarlet. 1s. per dozen, 5s. 6d. per 100.

AMARYLLIS BELLADONNA.

AMARYLLIS FORMOSISSIMA.

AMARYLLIS FORMOSISSIMA.^F (Jacobæa Lily.)

A very handsome bulbous plant, freely producing magnificent flowers of a very rich dark velvety crimson. This distinct and attractive Amaryllis is very suitable for growing in pots, and is always interesting, owing to the rich colour and peculiar shape of its flowers. *Vide* illustration. It will succeed well in a warm greenhouse. 6d. each; 5s. 6d. per dozen.

AMARYLLIS.

This deservedly popular family cannot be too highly recommended. The ease with which they are cultivated and the gorgeously beautiful flowers they produce at almost any season, make them most desirable in any collection. By gradually drying the bulbs they can be put to rest at any time during the year, and then, when required, if started in a gentle heat, they quickly develop their large Lily-like blossoms, which are of various colours, generally embracing crimson, white and red, scarlet, rose-flaked, striped white and crimson, with various shades of colours.

Choice selections of good sorts, 2, 3, 4, 5, and 6 guineas per dozen.

AMARYLLIS BELLADONNA.

(The Belladonna Lily.)

These beautiful hardy bulbs have large handsome blush flowers, richly flushed with rosy purple, rendering them extremely useful for greenhouse and conservatory decoration. 6s. and 9s. per dozen; 40s. to 60s. per 100.

AMARYLLIS IGNESCENS.

This distinct and ornamental species is one of the most handsome of stove bulbs. It is very free-blooming, and bears on erect scapes umbels of fiery orange-scarlet flowers. 2s. 6d. each; 18s. per dozen.

AMARYLLIS JOHNSONI.

A fine free-flowering variety, with showy red flowers, striped with white. 2s. 6d. each; 18s. per dozen.

AMARYLLIS REGINA.

A very handsome species. 2s. 6d. each; 18s. $\frac{1}{2}$ per dozen.

ALLIUM NEAPOLITANUM GRANDIFLORUM.

Selected roots, 3s. 6d. per 100; 30s. per 1,000.

SARDENSIS, a very pretty new species, with dark blue flowers and small white eye—

Selected roots, 3s. 6d. per 100; 30s. per 1,000.

GIGANTEA (GRANDIFLORA), new, large dark blue flowers, very handsome, much larger and finer than *C. Lucillie*. A valuable addition to our Spring flowers. 5s. per 100; 45s. per 1,000.

CHRISTMAS ROSES.

(*Helleborus Niger*.)

Five flowering clumps, 1s. 6d. and 2s. 6d. each;
15s. and 24s. per dozen.

This well-known hardy Winter-flowering plant does well in any ordinary garden soil, and is very suitable for forcing.

CYCLAMEN PERSICUM.

Too much can scarcely be said in favour of the superb varieties of this plant, of which the old *C. persicum* is the type, whether they are regarded as objects for the ornamentation of the greenhouse or conservatory, or for table decoration, for which their compact floriferous character eminently fits them. The flowers are also extremely useful for bouquets, and when plucked, if kept in water, they will last in freshness and beauty some weeks. 9s. and 12s. per dozen. Good flowering plants, 18s., 24s., 30s. and 42s. per dozen.

DIELYTRA SPECTABILIS.

Strong clumps of this graceful and well-known plant for early forcing. Price 5s. per dozen.

ERANTHIS HYEMALIS (Winter Aconites).

One of the earliest of Spring flowers, and will do in almost any soil or situation. Blossoms bright golden yellow. 2s. per 100; 17s. 6d. per 1,000.

FRITILLARIA MELEAGRIS.

Beautiful hardy border plants, throwing up slender stems about one foot high, with bell-shaped flowers, beautifully chequered and curiously marked, very pretty for Spring bedding, intermixed with Daffodils, &c. Finest mixed, per 100, 5s.; per dozen, 1s.
In 6 named varieties, 3s. per dozen.

FREESIAS.

FREESIA REFRACTA ALBA.

The chaste and fragrant flowers of these beautiful Cape bulbs render them of the greatest value for decorative purposes, especially where cut flowers are required during the winter months; they grow about 9 inches high, producing 6 to 8 flowers, the fragrance of which is most delightful. They can be easily forced, and should be planted 6 to 12 bulbs in a pot.

DOUBLE
TUBEROSES.

(POLIANTHES TUBEROSA.)

The perfectly double flowers of *Polyanthes* are well known for their delicious fragrance and pearly whiteness, being admirably adapted for Button-holes, Bouquets, &c.; indeed, are of the greatest value wherever cut flowers are required. By successive plantings these lovely flowers may be had all through the summer and autumn. They should be potted in rich loamy soil and started in a good bottom heat, being afterwards grown on in a stove, with plenty of moisture.

DOUBLE AMERICAN.

"THE PEARL."

Selected bulbs, 2s. 6d. per dozen; 15s. per 100. Finest picked bulbs, 20s. per 100.

The above can be supplied about the end of December.

GLADIOLUS.

(HYBRIDS OF GANDAVENSIS.)

There are few flowers more showy and beautiful than the *Gladiolus*, the varieties of the *Gandavensis* section are perfectly hardy and easily grown, whilst their erect and stately growth, and long spikes of flowers, developing themselves successively, never fail to win admirers.

To facilitate the cultivation of this highly decorative plant, a few remarks may be necessary to some:—

The best and safest time for planting is from the beginning of April to the end of May, when a continuous bloom may be assured from July to September.

Soil is not much a point for consideration, so long as it is not stiff and consolidated; but it is important that it should be deeply dug previous to planting.

Large bulbs should be planted from 3 to 4 inches, and smaller bulbs 2 inches deep.

During excessively dry weather, copious waterings are recommended.

When any bulbs show signs of growth before the time mentioned above, they should be potted and kept in a cool frame until the proper season for planting out.

LEMOINE'S GLADIOLUS.

This beautiful tribe of plants should be largely planted everywhere.

Orders are booked throughout the year at the following prices, and the bulbs supplied in January, February, or March.

BULL'S FOOD FOR PLANTS.

Contains in a concentrated form all the essential elements of plant life. It is of immense benefit applied as a top-dressing to plants and bulbs of all sorts grown in pots, especially when pot-bound, completely restoring exhausted energy, a few applications ensuring vigorous healthy growth, the flowers being produced in a most luxurious manner, combined with great richness of colouring. It can also be mixed with ordinary soil in potting, or may be used with most beneficial effect for Chrysanthemums, Shrubs, Vines, and all kinds of Fruits, whether in pots or planted in the open air.

ANALYSTS' REPORT.

The analysis shows this to be a complete Plant Food, and of the highest quality. The material not only contains an abundance of all the constituents necessary for plant growth, but the analysis shows also that the four chief constituents are each in that combination which renders them in the most beneficial and available form for the healthy development of plants.

For these reasons, users of this Plant Food in the proper quantities cannot fail to produce the very best results within the capability of their plants.

CANNON & NEWTON,

Analytical and Consulting Chemists, 39, Mincing Lane, London, E.C.

DIRECTIONS FOR USE.

For POT PLANTS AND BULBS.—Sprinkle on the surface of the soil, about every three weeks, at the rate of a small teaspoonful to a 5-inch pot, so that when the plants are watered, the Plant Food will be gradually absorbed into the soil.

For CHRYSANTHEMUMS.—At the time of potting, some of the Plant Food should be thoroughly mixed with the compost, and afterwards, when the buds begin to swell, frequent top-dressings should be given, the quantity used being estimated according to the size of the pots and vigour of the plants.

For ROSES, SHRUBS, VINES, &c., in Pots.—Use about a tablespoonful to a 12-inch pot several times during the season.

For PLANTS, FRUITS, ROSES, and all Plants in Borders and the Open Ground.—Apply about 2 ozs. to the square yard as often as occasion may require, raking and watering it in.

For LAWNS.—Scatter broadcast at the rate of 2 ozs. to the square yard, and well water.

Sold in Tins, containing about 1½ lbs., price 1s. each. Larger Size, containing about 5 lbs., 2s. 6d. each.

Also in Bags, 14 lbs., 4s. 6d. ; 28 lbs., 7s. 6d. ; 56 lbs., 12s. 6d. ; 112 lbs., 20s.
